

WELDED

design Alain Gilles - 2012

The ultimate linearity of the elemental and simple shapes, as a design choice that entrusts the finishing materials with the interpretation of the object.

As the name suggests, the legs of the Welded table are laser-cut, then welded together and subsequently painted, in white, anthracite grey, bright red, orange, green or brown. The rectangular table top is available in matt white lacquered wood, in canaletto walnut, in solid American walnut or in anthracite grey polished solid oak, in black acid-treated glass, in white acid-treated extra light glass, in matt white Carrara marble or in white or anthracite grey Laminam®.
